EDUCATION

Western University: BSc – Software Engineering Completed June 2025
Ivey Business School: HBA – Honours Business Administration Completed June 2025

- **Awards:** Nortel Engineering Distinction Scholarship, Western Scholarship of Excellence, Dean's List (2020-2025)
- **Cumulative GPA:** 3.9/4.0

WORK EXPERIENCE

Amazon Web Services | *Software Development Engineer – AWS Identity Threat* September 2025 – Present

- Engineered a **multi-region ML deployment system** with automated guardrails and failover mechanisms, reducing rollback time from 1 hour to under 10 minutes and cutting service restart times by 75% through regional isolation.
- Managed **high-pressure on-call rotations** for critical AWS services, including a cross-team mitigation of a critical event and executing post-incident action items to harden system resilience.
- Designed an automated security response system, evolving a successful hackathon MVP into a formal technical proposal that aligned four cross-functional security teams on real-time detection and notification workflows.
- Contributed to the design and implementation of an ML platform that automated training for real-time threat detection, reducing **model time-to-production from 3 days to 2 hours** while streamlining new model onboarding.
- Accelerated a high-priority automated detection system from **conception to production over a 48-hour period**, shipping critical security functionality ahead of a projected two-week development cycle.

Amazon Web Services | *Software Development Engineer Intern – AWS SignUp* June 2024 – August 2024

- Implemented a new security feature in the Sign-Up flow resulting in increased friction for bot traffic.
- Collaborated with senior engineers and product management across three teams to enhance feature extensibility and reduce future development costs for planned functionality expansions **from 3 months to 2 weeks**.
- Drove the feature from **prototype to production**, including writing robust unit and integration tests, successfully navigating security review processes, and overseeing code deployment through a multi-stage pipeline.

Richmond Capital Partners | *Managing Partner* September 2023 – August 2025

- **Engineered the fund's quant dashboard and analysis platform** which performs real-time risk analysis and provides portfolio rebalancing suggestions based on a proprietary trend-following algorithm.
- Led capital-raising efforts, pitching to over 20 investors and successfully **securing over 30% of the fund's total capital** (\$500k AUM), driving significant growth and enhancing investment capacity.
- Spearheaded growth of Western's largest student-run investment fund by assembling a diverse leadership team and onboarding 30+ analysts. Cultivated a high-performing research and investment team, aligning talent acquisition with the fund's strategic objectives.
- Led the **development of quantitative strategies**, optimizing returns through innovative approaches such as arbitrage in secondary markets and options spreads.

Alvia Systems | *Junior Machine Learning Developer* March 2024 – May 2024

- Trained a machine learning model on numerous land and climate datasets to perform climate risk assessment on residential properties, succeeded in **improving accuracy by 24%** over the previous version of the model.

PROJECTS

Atlas Code | [Project Link](#) January 2026

- Developed an AI-driven GitHub App that automates technical debt remediation by orchestrating **LLM-based sub-agents** to analyze codebases and generate production-ready patches via automated Pull Requests.

SKILLS & INTERESTS

Languages: Python, JavaScript, Java, HTML/CSS, SQL
Frameworks/Technologies: Git, React, Claude, Kiro, AWS (EC2, S3, SageMaker, DynamoDB), Supabase, Next.js, REST, PyTorch, Pandas, Numpy, MERN Stack, Postgres
Interests: Golf, Hockey, Hiking, Guitar
